

# Testing Boost: a Planning and Design Sprint

- Overview of current system, and it's problems.
- Boost requirements for a test system.
- Existing technology review.
- Design/plan solutions.

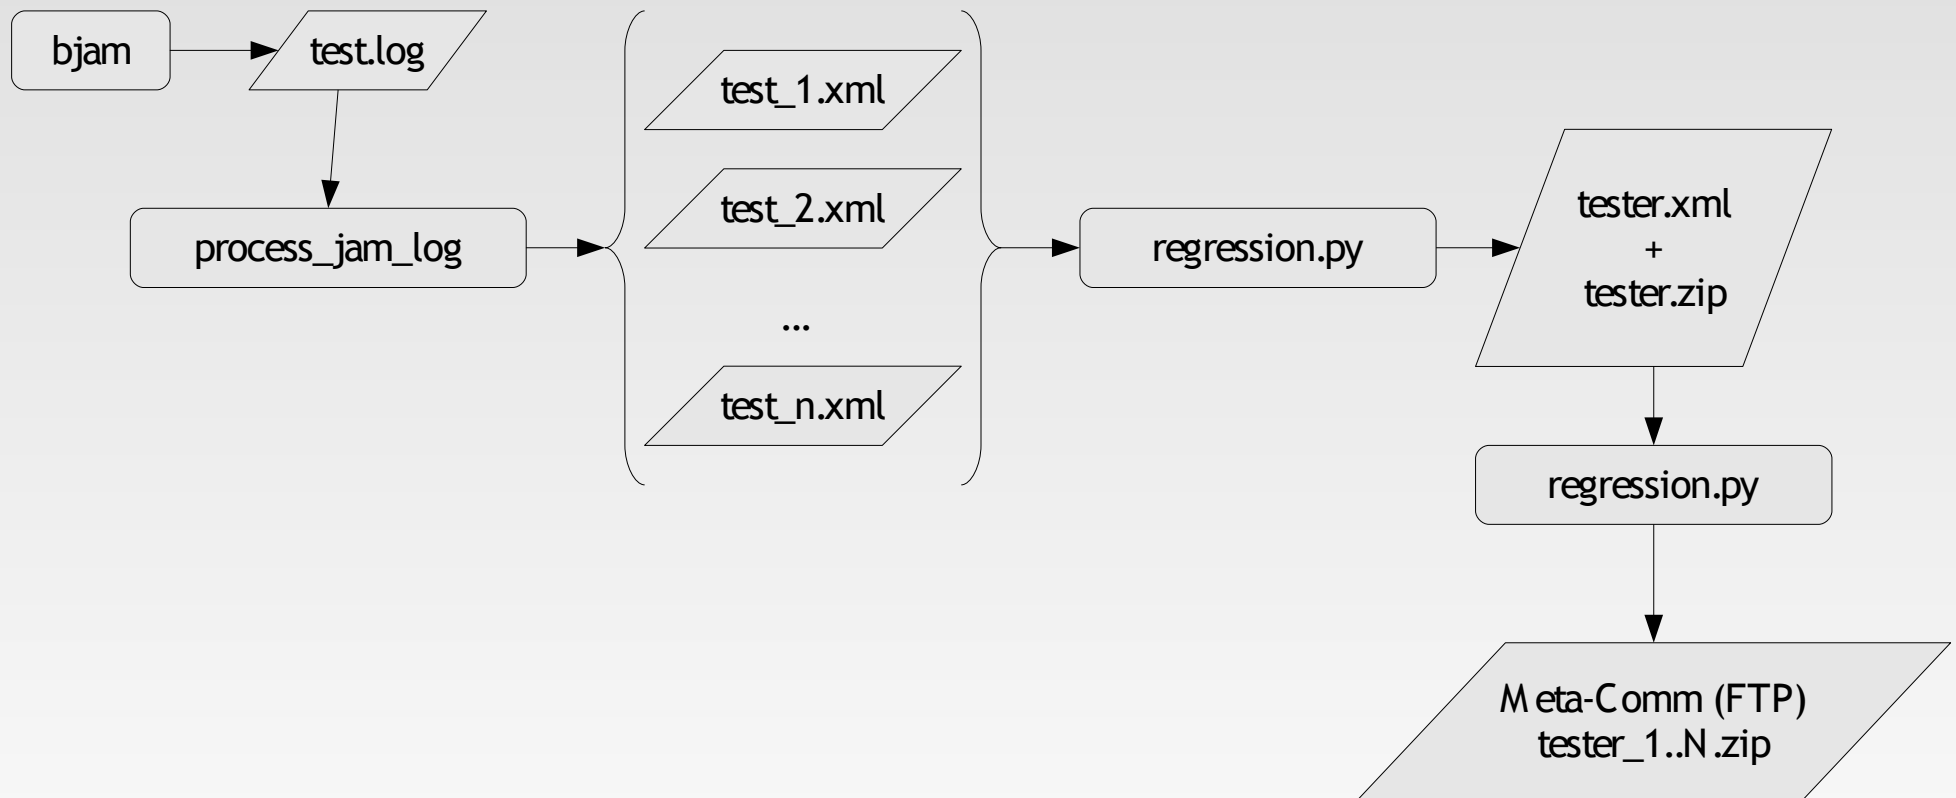

# Current System: Overview

- From CVS to users and authors getting results:

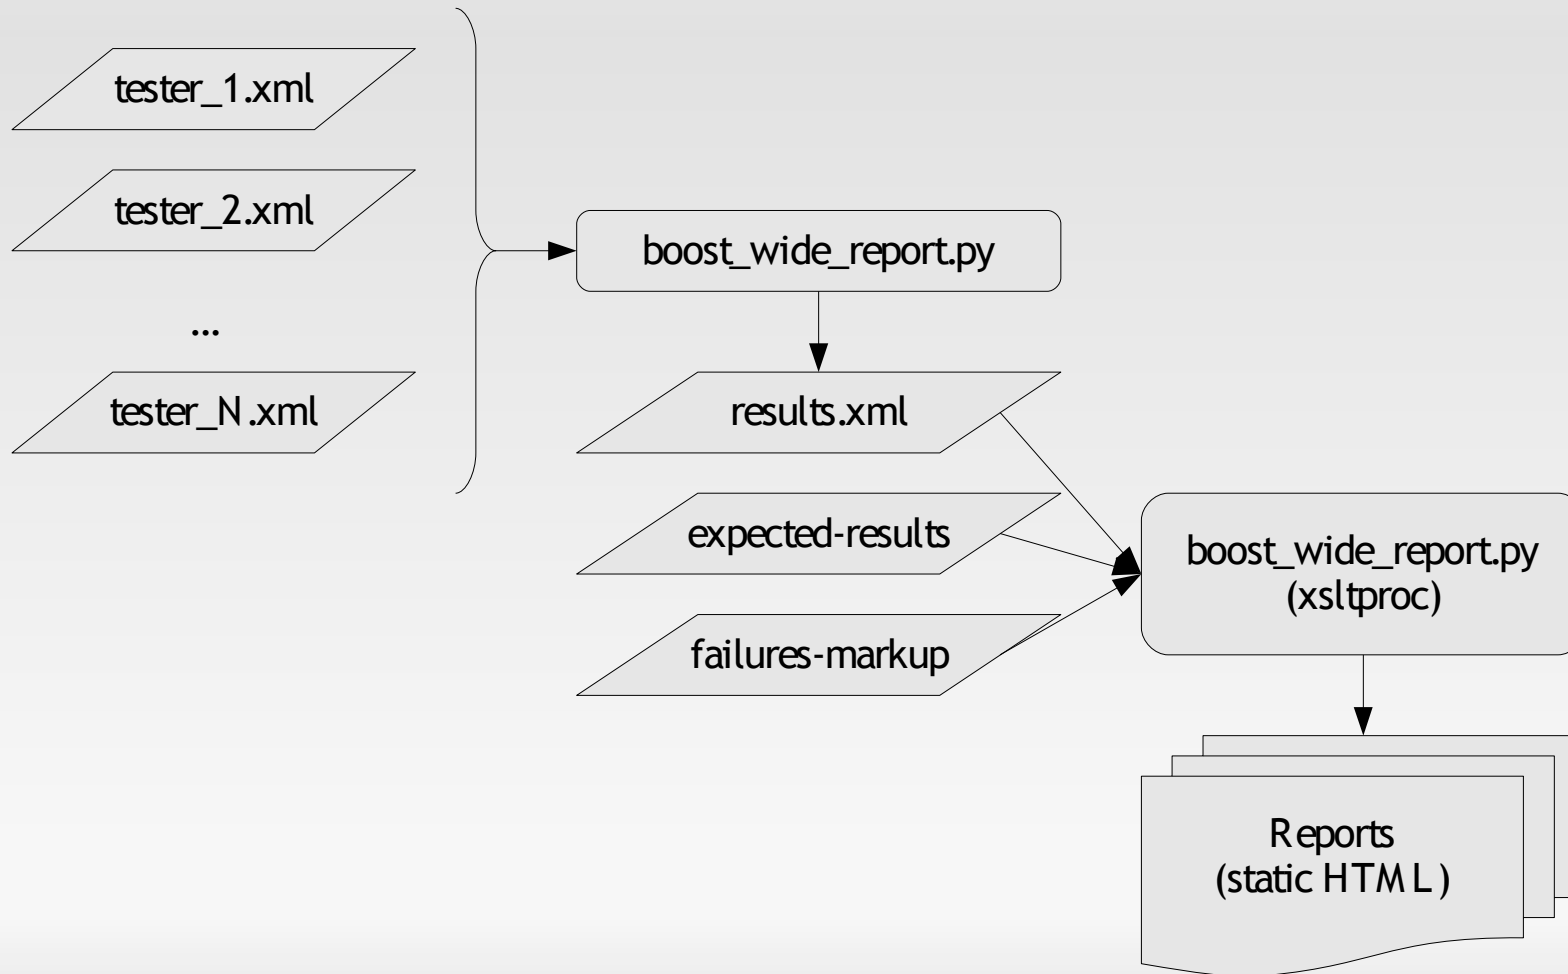

# Current System: Overview

- Testers execute tests and generate a log:

# Current System: Overview

- Server processes tester logs to results:

# Current System: Problems

- Large results delay
- Not scalable
  - Hard for testers to control resource use
  - Results processed in one batch
- No tracking of state
  - Minimal test environment information
  - No historical results

# Requirements

- Developers
- Testers
- Users
- System

# Existing Technology

- Buildbot
- QMTest
- Dart
- CMake
- Boost.Test

# Solutions

- Anything is possible... Nothing is perfect.

6

## *Developers*

*Immediate results (10 minutes)*

*Experimental tests*

## *Testers*

*Minimal setup (zero-install)*

*Specify tests to execute*

*Specify machine resources*

Running tests when changes affect real code

No need for manual intervention for testing changes

## *Users*

## *System*

*Piecemeal result posting*

*Test groups, to define tests to run*

Reliability

No false results

Monitoring of system

Self-testing

Must work 95% of the time

# Existing Technology

- Buildbot
- QTest
- Dart
- CMake
- Boost.Test

- **Buildbot** <<http://buildbot.net/>>
  - Manages testing resources.
- **QTest** <<http://www.codesourcery.com/qmtest/>>
  - Defines and runs tests.
- **Dart 2** <<http://www.na-mic.org/Wiki/index.php/Dart2Summary>>
  - Web based test results reporting.
- **CMake** <<http://www.cmake.org/>>
  - Build system frontend. Generates projects/makefiles for existing build tools.
- **Boost.Test** <<http://boost.org/libs/test/doc/index.html>>
  - Implementation and execution of C++ tests.

# Solutions

- Anything is possible... Nothing is perfect.

## *Solutions*

### Dart Test reporting system

- Test the feasibility of using Dart to replace the XSLT reports.

### *Plan: Near Term*

#### Replace reporting system

- Doug & Troy; will make a test case of using CMake+CTest+Dart for at least one of the Boost libraries.
- Rene; will make changes to regression.py and collect\_and\_upload\_logs.py to additionally submit results to Dart. (COMPLETED, Dart server at <<http://beta.boost.org:8081>>)
- Noel & Rene; will make changes to Boost.Jam and Boost.Build to submit results directly to Dart.
- Everyone; evaluate results as available in Dart.

### *Plan: Long Term*
